12.2	Horseshoes	245
12.3	Symbol plane	249
12.4	Prune danish	252
12.5	Recoding, symmetries, tilings	253
	résumé 256 commentary 257 exercises 259 references 260	
<b>13</b>	<b>Fixed points, and how to get them</b>	<b>264</b>
13.1	Where are the cycles?	265
13.2	One-dimensional mappings	269
13.3	Multipoint shooting method	271
13.4	Flows	273
	résumé 277 commentary 278 exercises 280 references 282	
<b>II</b>	<b>Chaos rules</b>	<b>284</b>
<b>14</b>	<b>Walkabout: Transition graphs</b>	<b>286</b>
14.1	Matrix representations of topological dynamics	286
14.2	Transition graphs: wander from node to node	288
14.3	Transition graphs: stroll from link to link	291
	résumé 295 commentary 295 exercises 297 references 297	
<b>15</b>	<b>Counting</b>	<b>299</b>
15.1	How many ways to get there from here?	300
15.2	Topological trace formula	302
15.3	Determinant of a graph	305
15.4	Topological zeta function	309
15.5	Infinite partitions	311
15.6	Shadowing	313
15.7	Counting cycles	314
	résumé 318 commentary 319 exercises 320 references 323	
<b>16</b>	<b>Transporting densities</b>	<b>324</b>
16.1	Measures	325
16.2	Perron-Frobenius operator	326
16.3	Why not just leave it to a computer?	329
16.4	Invariant measures	331
16.5	Density evolution for infinitesimal times	334
16.6	Liouville operator	336
	résumé 338 commentary 340 exercises 341 references 342	

<b>17 Averaging</b>	<b>345</b>
17.1 Dynamical averaging	345
17.2 Evolution operators	353
17.3 Lyapunov exponents	355
résumé 359 commentary 359 exercises 361 references 361	
<b>18 Trace formulas</b>	<b>364</b>
18.1 A trace formula for maps	365
18.2 A trace formula for flows	370
18.3 An asymptotic trace formula	373
résumé 374 commentary 375 exercises 375 references 376	
<b>19 Spectral determinants</b>	<b>377</b>
19.1 Spectral determinants for maps	377
19.2 Spectral determinant for flows	379
19.3 Dynamical zeta functions	381
19.4 False zeros	385
19.5 Spectral determinants vs. dynamical zeta functions	385
19.6 All too many eigenvalues?	387
résumé 388 commentary 389 exercises 390 references 391	
<b>20 Cycle expansions</b>	<b>393</b>
20.1 Pseudocycles and shadowing	393
20.2 Construction of cycle expansions	396
20.3 Cycle formulas for dynamical averages	400
20.4 Cycle expansions for finite alphabets	403
20.5 Stability ordering of cycle expansions	404
20.6 Dirichlet series	407
résumé 408 commentary 409 exercises 411 references 413	
<b>21 Discrete factorization</b>	<b>415</b>
21.1 Preview	416
21.2 Discrete symmetries	418
21.3 Dynamics in the fundamental domain	419
21.4 Factorizations of dynamical zeta functions	423
21.5 $C_2$ factorization	425
21.6 $D_3$ factorization: 3-disk game of pinball	426
résumé 428 commentary 429 exercises 429 references 430	
<b>III Chaos: what to do about it?</b>	<b>432</b>
<b>22 Why cycle?</b>	<b>434</b>
22.1 Escape rates	434
22.2 Natural measure in terms of periodic orbits	436
22.3 Flow conservation sum rules	438
22.4 Correlation functions	439
22.5 Trace formulas vs. level sums	440
résumé 442 commentary 442 exercises 443 references 444	

<b>23 Why does it work?</b>	<b>446</b>
23.1 Linear maps: exact spectra	447
23.2 Evolution operator in a matrix representation	451
23.3 Classical Fredholm theory	454
23.4 Analyticity of spectral determinants	456
23.5 Hyperbolic maps	461
23.6 The physics of eigenvalues and eigenfunctions	463
23.7 Troubles ahead	465
résumé 466 commentary 468 exercises 470 references 470	
<b>24 Intermittency</b>	<b>473</b>
24.1 Intermittency everywhere	474
24.2 Intermittency for pedestrians	477
24.3 Intermittency for cyclists	488
24.4 BER zeta functions	494
résumé 496 commentary 497 exercises 498 references 499	
<b>25 Deterministic diffusion</b>	<b>501</b>
25.1 Diffusion in periodic arrays	502
25.2 Diffusion induced by chains of 1 – dimensional maps	506
25.3 Marginal stability and anomalous diffusion	513
résumé 516 commentary 517 exercises 520 references 520	
<b>26 Turbulence?</b>	<b>522</b>
26.1 Fluttering flame front	523
26.2 Infinite-dimensional flows: Numerics	526
26.3 Visualization	528
26.4 Equilibria of equilibria	529
26.5 Why does a flame front flutter?	531
26.6 Periodic orbits	534
26.7 Intrinsic parametrization	534
26.8 Energy budget	535
résumé 538 commentary 538 exercises 539 references 539	
<b>27 Irrationally winding</b>	<b>542</b>
27.1 Mode locking	543
27.2 Local theory: “Golden mean” renormalization	548
27.3 Global theory: Thermodynamic averaging	550
27.4 Hausdorff dimension of irrational windings	552
27.5 Thermodynamics of Farey tree: Farey model	554
résumé 556 commentary 556 exercises 559 references 560	
<b>IV The rest is noise</b>	<b>563</b>
<b>28 Noise</b>	<b>565</b>
28.1 Deterministic transport	566
28.2 Brownian diffusion	567
28.3 Weak noise	568

28.4 Weak noise approximation . . . . .	570
résumé 571 commentary 572 exercises 573 references 573	
<b>29 Relaxation for cyclists</b>	<b>576</b>
29.1 Fictitious time relaxation . . . . .	577
29.2 Discrete iteration relaxation method . . . . .	582
29.3 Least action method . . . . .	586
résumé 586 commentary 587 exercises 590 references 590	
<b>V Quantum chaos</b>	<b>593</b>
<b>30 Prologue</b>	<b>595</b>
30.1 Quantum pinball . . . . .	596
30.2 Quantization of helium . . . . .	598
commentary 599 references 600	
<b>31 Quantum mechanics the short short version</b>	<b>601</b>
exercises 605	
<b>32 WKB quantization</b>	<b>606</b>
32.1 WKB ansatz . . . . .	606
32.2 Method of stationary phase . . . . .	609
32.3 WKB quantization . . . . .	610
32.4 Beyond the quadratic saddle point . . . . .	612
résumé 613 commentary 614 exercises 615 references 615	
<b>33 Semiclassical evolution</b>	<b>616</b>
33.1 Hamilton-Jacobi theory . . . . .	616
33.2 Semiclassical propagator . . . . .	625
33.3 Semiclassical Green function . . . . .	628
résumé 634 commentary 635 exercises 637 references 638	
<b>34 Semiclassical quantization</b>	<b>639</b>
34.1 Trace formula . . . . .	639
34.2 Semiclassical spectral determinant . . . . .	645
34.3 One-dof systems . . . . .	646
34.4 Two-dof systems . . . . .	647
résumé 648 commentary 649 exercises 651 references 651	
<b>35 Quantum scattering</b>	<b>653</b>
35.1 Density of states . . . . .	653
35.2 Quantum mechanical scattering matrix . . . . .	657
35.3 Krein-Friedel-Lloyd formula . . . . .	658
35.4 Wigner time delay . . . . .	661
commentary 663 exercises 664 references 664	

<b>36 Chaotic multiscattering</b>	<b>667</b>
36.1 Quantum mechanical scattering matrix . . . . .	668
36.2 $N$ -scatterer spectral determinant . . . . .	671
36.3 Semiclassical 1-disk scattering . . . . .	675
36.4 From quantum cycle to semiclassical cycle . . . . .	682
36.5 Heisenberg uncertainty . . . . .	685
commentary 685 references 686	
<b>37 Helium atom</b>	<b>687</b>
37.1 Classical dynamics of collinear helium . . . . .	688
37.2 Chaos, symbolic dynamics and periodic orbits . . . . .	689
37.3 Local coordinates, Jacobian matrix . . . . .	693
37.4 Getting ready . . . . .	695
37.5 Semiclassical quantization of collinear helium . . . . .	697
résumé 704 commentary 704 exercises 706 references 707	
<b>38 Diffraction distraction</b>	<b>708</b>
38.1 Quantum eavesdropping . . . . .	708
38.2 An application . . . . .	714
résumé 719 commentary 720 exercises 721 references 722	
<b>Epilogue</b>	<b>724</b>
<b>Index</b>	<b>729</b>

**Volume www: Appendices on ChaosBook.org**

---

<b>A A brief history of chaos</b>	<b>747</b>
A.1 Chaos is born	747
A.2 Chaos with us	752
A.3 Death of the Old Quantum Theory	759
commentary 761 references 762	
<b>B Linear stability</b>	<b>766</b>
B.1 Linear algebra	766
B.2 Eigenvalues and eigenvectors	768
B.3 Eigenspectra: what to make out of them?	775
B.4 Stability of Hamiltonian flows	777
B.5 Monodromy matrix for Hamiltonian flows	778
commentary 780 exercises 781 references 781	
<b>C Finding cycles</b>	<b>783</b>
C.1 Newton-Raphson method	783
C.2 Hybrid Newton-Raphson / relaxation method	784
<b>D Symbolic dynamics techniques</b>	<b>787</b>
D.1 Topological zeta functions for infinite subshifts	787
D.2 Prime factorization for dynamical itineraries	795
<b>E Counting itineraries</b>	<b>799</b>
E.1 Counting curvatures	799
exercises 800	
<b>F Implementing evolution</b>	<b>801</b>
F.1 Koopmania	801
F.2 Implementing evolution	803
commentary 806 exercises 806 references 806	
<b>G Transport of vector fields</b>	<b>808</b>
G.1 Evolution operator for Lyapunov exponents	808
G.2 Advection of vector fields by chaotic flows	813
commentary 817 exercises 817 references 817	
<b>H Discrete symmetries of dynamics</b>	<b>819</b>
H.1 Preliminaries and definitions	819
H.2 Invariants and reducibility	826
H.3 Lattice derivatives	829
H.4 Periodic lattices	832
H.5 Discrete Fourier transforms	834
H.6 $C_{4v}$ factorization	837
H.7 $C_{2v}$ factorization	842
H.8 Hénon map symmetries	844
commentary 845 exercises 845 references 847	

<b>I Convergence of spectral determinants</b>	<b>850</b>
I.1 Curvature expansions: geometric picture	850
I.2 On importance of pruning	853
I.3 Ma-the-matical caveats	854
I.4 Estimate of the $n$ th cumulant	855
<b>J Infinite dimensional operators</b>	<b>857</b>
J.1 Matrix-valued functions	857
J.2 Operator norms	859
J.3 Trace class and Hilbert-Schmidt class	860
J.4 Determinants of trace class operators	862
J.5 Von Koch matrices	865
J.6 Regularization	867
exercises 869 references 869	
<b>K Thermodynamic formalism</b>	<b>871</b>
K.1 Rényi entropies	871
K.2 Fractal dimensions	876
résumé 880 commentary 880 exercises 881 references 881	
<b>L Statistical mechanics recycled</b>	<b>883</b>
L.1 The thermodynamic limit	883
L.2 Ising models	886
L.3 Fisher droplet model	889
L.4 Scaling functions	894
L.5 Geometrization	897
résumé 904 commentary 905 exercises 905 references 906	
<b>M Noise/quantum corrections</b>	<b>908</b>
M.1 Periodic orbits as integrable systems	908
M.2 The Birkhoff normal form	912
M.3 Bohr-Sommerfeld quantization of periodic orbits	913
M.4 Quantum calculation of $\hbar$ corrections	915
references 921	
<b>S Projects</b>	<b>924</b>
S.1 Deterministic diffusion, zig-zag map	926
references 931	
S.2 Deterministic diffusion, sawtooth map	932

## Contributors

No man but a blockhead ever wrote except for money  
—Samuel Johnson

This book is a result of collaborative labors of many people over a span of several decades. Coauthors of a chapter or a section are indicated in the byline to the chapter/section title. If you are referring to a specific coauthored section rather than the entire book, cite it as (for example):

C. Chandre, F.K. Diakonov and P. Schmelcher, section “Discrete cyclist relaxation method,” in P. Cvitanović, R. Artuso, R. Mainieri, G. Tanner and G. Vattay, *Chaos: Classical and Quantum* (Niels Bohr Institute, Copenhagen 2010); [ChaosBook.org/version13](http://ChaosBook.org/version13).

Do not cite chapters by their numbers, as those change from version to version. Chapters without a byline are written by Predrag Cvitanović. Friends whose contributions and ideas were invaluable to us but have not contributed written text to this book, are credited in the acknowledgments.

Solutions 1.1, 2.1	

## Acknowledgments

I feel I never want to write another book. What's the good!  
I can eke living on stories and little articles, that don't cost  
a tithe of the output a book costs. Why write novels any  
more!

—D.H. Lawrence

This book owes its existence to the Niels Bohr Institute's and Nordita's hospitable and nurturing environment, and the private, national and cross-national foundations that have supported the collaborators' research over a span of several decades. P.C. thanks M.J. Feigenbaum of Rockefeller University; D. Ruelle of I.H.E.S., Bures-sur-Yvette; I. Procaccia of the Weizmann Institute; P.H. Damgaard of the Niels Bohr International Academy; G. Mazenko of U. of Chicago James Franck Institute and Argonne National Laboratory; T. Geisel of Max-Planck-Institut für Dynamik und Selbstorganisation, Göttingen; I. Andrić of Rudjer Bošković Institute; P. Hemmer of University of Trondheim; The Max-Planck Institut für Mathematik, Bonn; J. Lowenstein of New York University; Edificio Celi, Milano; Fundação de Faca, Porto Seguro; and Dr. Dj. Cvitanović, Kostrena, for the hospitality during various stages of this work, and the Carlsberg Foundation, Glen P. Robinson, Humboldt Foundation and National Science Foundation grant DMS-0807574 for partial support.

The authors gratefully acknowledge collaborations and/or stimulating discussions with E. Aurell, M. Avila, V. Baladi, D. Barkley, B. Brenner, A. de Carvalho, D.J. Driebe, B. Eckhardt, M.J. Feigenbaum, J. Frøjlund, S. Froehlich, P. Gaspar, P. Gaspard, J. Guckenheimer, G.H. Gunaratne, P. Grassberger, H. Gutowitz, M. Gutzwiller, K.T. Hansen, P.J. Holmes, T. Janssen, R. Klages, Y. Lan, B. Lautritzen, J. Milnor, M. Nordahl, I. Procaccia, J.M. Robbins, P.E. Rosenqvist, D. Ruelle, G. Russberg, B. Sandstede, M. Sieber, D. Sullivan, N. Sørndergaard, T. Tél, C. Tresser, R. Wilczak, and D. Wintgen.

We thank Dorte Glass, Tzatzilha Torres Guadarrama and Raenell Soller for typing parts of the manuscript; D. Borrero, B. Lautrup, J.F. Gibson and D. Viswanath for comments and corrections to the preliminary versions of this text; M.A. Porter for the quotation on page 138 and for lengthening the manuscript by the 2013 definite articles hitherto missing; M.V. Berry for the quotation on page 747; H. Fogedby for the quotation on page 456; J. Greensite for the quotation on page 7; Ya.B. Pesin for the remarks quoted on page 762; M.A. Porter for the quotations on page 21 and page 754; E.A. Spiegel for quotation on page 3; and E. Valesco for the quotation on page 25.

F. Haake's heartfelt lament on page 370 was uttered at the end of the first conference presentation of cycle expansions, in 1988. G.P. Morriss advice to students as how to read the introduction to this book, page 6, was offered during a 2002 graduate course in Dresden. K. Huang's C.N. Yang interview quoted on page 332 is available on [ChaosBook.org/extras](http://ChaosBook.org/extras). T.D. Lee remarks on as to who is to blame, page 37 and page 265, as well as M. Shub's helpful technical remark on page 468 came during the Rockefeller University December 2004 "Feigenbaum Fest." Quotes on pages 37, 126, and 329 are taken from a book review by J. Guckenheimer [1.1].

Who is the 3-legged dog reappearing throughout the book? Long ago, when

we were innocent and knew not Borel measurable  $\alpha$  to  $\Omega$  sets, P. Cvitanović asked V. Baladi a question about dynamical zeta functions, who then asked J.-P. Eckmann, who then asked D. Ruelle. The answer was transmitted back: "The master says: 'It is holomorphic in a strip.'" Hence His Master's Voice logo, and the 3-legged dog is us, still eager to fetch the bone. The answer has made it to the book, though not precisely in His Master's voice. As a matter of fact, the answer *is* the book. We are still chewing on it.

Profound thanks to all the unsung heroes—students and colleagues, too numerous to list here—who have supported this project over many years in many ways, by surviving pilot courses based on this book, by providing invaluable insights, by teaching us, by inspiring us.
